Flywheel is a rotating mechanical device used to store kinetic energy. It usually has a significant rotating inertia, and thus resists a sudden change in the rotational speed (Bitterly 1998; Bolund et al. 2007). With the increasing problem in environment and energy, flywheel energy storage, as a special type of mechanical energy storage technology, has extensive ...

Flywheel energy storage technology is a form of mechanical energy storage that works by accelerating a rotor (flywheel) to a very high speed and maintaining the energy in the system as kinetic energy.
