NREL researcher Patrick Davenport said the ENDURING project helped demonstrate a clear path to exceed 50% round-trip efficiency. Round-trip efficiency specifies the percentage of electricity put into storage and later retrieved. The higher the round-trip efficiency, the less energy is lost in the storage process.

Absolute humidity is "relative" to air temperature. At 75 degrees Fahrenheit & 65% RH there is "no risk for mold". At a cooler 70 degrees Fahrenheit, a more humid 66% RH is still "no risk for mold". The dynamic relationship between Temperature and Humidity is why it can be confusing and why people need a chart or app for that.
