How do you determine the amount of energy stored in a device?

To determine the amount of energy stored in a particular device, one can refer to the equation of kinetic energy of a rotating object, which is given by $E = \frac{1}{2} I \omega^2$, where I is the moment of inertia and for a solid rotating disc is defined as $I = \frac{1}{2} m r^2$, where m is the mass of the disc and r is the radius of the disc.
