What is ANSYS HFSS?

At Chemring Technology Solutions, Ansys HFSS plays a key role in most projects involving wireless communications, radar and high-frequency networking in which electromagnetic fields are critical. Virtual prototypes from Ansys HFSS allow Andar to create innovative designs and reduce the amount of physical prototyping to a minimum.

Why should you use Ansys?

Ansys helps you advance battery designs while balancing safety, performance, size, cost and reliability to make you the market leader. Our multiphysics battery simulation solution helps bring together interdisciplinary expertise at different scales. With our help, you can reduce project costs by up to 30% and design cycle time by up to 50%.

How can Ansys Fluent improve battery reliability?

This webinar highlights how Ansys Fluent helps designers efficiently perform battery thermal management to improve battery life and reliability significantly. Watch part 3 of the battery reliability series focusing on battery structural analysis to address critical design challenges, such as vibration, reliability, and crash safety.

Does Ansys offer EMI/EMC simulation?

Ansys offers a battery system EMI/EMC simulation solution that seamlessly combines frequency and time domain simulation. Learn how to simulate an electrothermal coupled Li-ion battery pack model with cold plate liquid cooling a common design in electric vehicles.

What is a battery energy storage system (BESS)?

The Challenge Fueled by an increasing desire for renewable energies and battery storage capabilities, many Utilities are considering significantly increasing their investments in battery energy storage systems (BESS), which store energy from solar arrays or the electric grid, and then provide that energy to a residence or business.

What is HFSS solution frequency?

ce of the transmission line that is enclosed within the wave port igning transmission lines. The solution frequency setting  
In Brief The solution frequency is used by HFSS to determine the maximum initial tetrahedra size an high HFSS explicitly solves the given model.  
In Pictures In Detail The solution frequency i

Modal analysis enables you to model the undamped, free vibration characteristics of a structure by determining natural frequencies and mode shapes. You can then design your structure to avoid resonant frequencies or to vibrate at a specific frequency. Note that, although the results of a modal analysis include displacement results, you should only use ...

Ansys HFSS is a high-frequency structure simulator that can be used to design and simulate high-frequency electronic items. This includes antennas, antenna arrays, RF or microwave components, high-speed interconnects, filters, connectors, IC ...

2020 ANSYS, Inc. Unauthorized use, distribution, or duplication is prohibited. Frequency Solution and Effects Overview  
oThe RL solution does not explicitly solve in transition region, instead there is: -one RL Solve at DC -one RL Solve at AC  
oAt AC, it is assumed that the surface current is well developed (skin depth is very small)

In Analysis Settings of Explicit Dynamics System, you will find a field called "Reference Energy Cycle". The energy reference cycle in default is set to 0. Explicit Dynamics solver always calculates the total energy (summation of total internal energy and total kinetic energy) at the energy reference cycle and treats it as the reference energy. [...]

Internal energy and burn fraction are material variables, defined per material in an element. They are different from grid variables such as stress and displacement which are defined per element or per node. User can use user-defined results Int\_Energy and Alpha to obtain the internal energy and burn fraction of an explosive material. The part [...]

Ansys High Frequency Electronic Solutions for the A& D Industry In the Aerospace and Defense market, high fidelity physics modeling is critical to mission success. In this session, we will cover Ansys' top areas in high frequency electromagnetic applications: Communications, Detection, Discharge and Electronics.

The total hourglass energy can be plotted under Solution Information via Energy Summary. To find the hourglass energy corresponding to a specific body in a model, Part Summary can be used. You need to right click on Solution and then click on Open Solver Files Directory. Then use any text editor to open the print file "admodel.prt".

a software-defined storage solution built on cost-effective HPE ProLiant DL Gen10 Plus servers and offers a broad set of enterprise storage features including enterprise-grade data availability (backup and disaster recovery), data accessibility (NFS, SMB, HDFS, Object storage), and data compliance (audit log, industry certifications).

Why is damped frequency is lower than undamped frequency with viscous damping but larger with structural damping? How can we apply different loading conditions on both the top and bottom of a shell/surface body, e.g., temperature on top face and convection on bottom face.

Frequency response is not available for total deformation in ANSYS Mechanical. The frequency response outputs the amplitude of the scoped area in one direction. For example, if there is frequency response from the X direction and Y direction, the maximum deformation/amplitude value in X and Y direction actually may not happen at the same time [...]

This can be done in Workbench Mechanical using User Defined Results. Please do the following: 1. ANSYS has an established leadership position in the energy and related industries. Its solutions are being employed in energy production and power generation projects - including renewable (wind, solar, fuel cells, hydropower, ocean & tidal wave, nuclear, fossil fuels (coal, oil, and gas), as well as energy reduction and efficiency projects.

When solving for chemical species transport, the effect of enthalpy transport due to species diffusion can be included in the energy equation. If using the pressure-based solver, this option can be enabled by opening the Species Model panel and clicking the Diffusion Energy Source checkbox. In the density-based solver, this term is always included in [...]
