The Rajasthan block, RJ-ON-90/1, is spread over 3,111 km² in the Barmer district of Rajasthan. 13 dry wells were drilled in Rajasthan block before Cairn struck "black gold" in the 14th well. The organisation has come a long way since, with numerous discoveries in the Rajasthan block, bringing a number of fields to production, and gearing towards the next phase of growth.

The successful completion of the project will support Egyptian Government's target of 42 % supply of electricity from renewable energy sources by 2030 and the national priority area of ...

In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...

Energy storage, such as battery storage or thermal energy storage, allows organizations to store renewable energy generated on-site for later use or shift building energy loads to smooth energy demand. With a large battery, for example, excess electricity generated by rooftop solar can be stored for later use. By coupling on-site renewables ...

Electrical power Engineer Student || Cairo University Energy storage member (CURT) Robotics Instructor

(IEEE) · As a passionate Electrical Power Engineering student at Cairo University, I am driven by a deep interest in power systems, electronics, and sustainable energy solutions. My journey in engineering has been marked by hands-on experiences, including PCB design,c++ ...

In this study, a new type of shaped energy storage phosphorus building aggregate was developed, and the feasibility of its application in ES-LAC was evaluated from the micro- and macro-performance perspectives. However, the study did not consider the actual model of temperature when determining the energy saving effect of ES-LAC for board and ...

Where (\overline{C}_p) is the average specific heat of the storage material within the temperature range. Note that constant values of density ρ ($\text{kg}\cdot\text{m}^{-3}$) are considered for the majority of storage materials applied in buildings.For packed bed or porous medium used for thermal energy storage, however, the porosity of the material should also be taken into account.

In this context, urban energy systems modelling is fundamental in helping megacities to plan and program the steps to meet the sustainable development goals [3].Urban energy systems are the combined processes of acquiring and using energy to meet the energy demands of cities inhabitants [4].The technical literature is rich of studies that analyze national ...

The Building Technologies Office (BTO) hosted a workshop, Priorities and Pathways to Widespread Deployment of Thermal Energy Storage in Buildings on May 11-12, 2021. It was focused on the goal of advancing thermal energy storage (TES) solutions for buildings. Participants included leaders from industry, academia, and government.

NREL is significantly advancing the viability of thermal energy storage (TES) as a building decarbonization resource for a highly renewable energy future. Through industry partnerships, ...
