This is a DIY Portable 12 V Battery Energy Storage Spot Welding PCB Circuit Boar. This Circuit contains an Electronic Welding Module that is the main thing in this whole product. Spot welding is welded by the principle of rapid local heating and cooling by high current. This Product is much portable and durable that it can easily carry anywhere.

The higher the internal resistance of the capacitors, the longer they take to discharge. With the capacitors I selected, the capacitors can dump 84J into the weld in 10 ms while the Maxwell supercap would take 14ms despite being much larger. The voltage of the capacitor bank also determines how quickly it is able to deliver power.
