When will Cape Verde's energy storage centre be operational?

During the presentation of the project, Cape Verde's National Director for Industry, Trade and Energy, Rito Évora, announced that the energy storage centre is scheduled to be operational by 2030, with the aim of injecting 7% of renewable energy into the national public grid and 18% into that of the island of Santiago.

What is the Cape Verde reference system (CVRs)?

The recently published Cape Verde Reference System (CVRS) has been used as the baseline for the present study. It details the topology and components of the networks of both Santiago and São Vicente islands, including load and renewable profiles. 2.1. Energy mix, challenges, and future plans

Does Cape Verde have a wave energy potential?

In the case of Cape Verde, there is one study evaluating the wave energy potential which highlights the resource available, particularly for the northern islands, such as São Vicente. Unfortunately, the study identifies the wave resource to match that of the wind.

Is Cape Verde a developing state?

The archipelago of Cape Verde is a developing state in West Africa with extreme external energy dependency on refined oil imports despite their available solar and wind resources. Aligned with the global energy transition, the local government established goals in 2011 aiming at 50 and 100% RES.

Why is Cape Verde's energy grid falling out of scope?

Nevertheless, we discarded this due to the fact that the grid in Cape Verde is currently in expansion and this process is expected to continue during the foreseeable future following criteria related to energy access and political will, rather than techno-economical feasibility. Thus, falling out of scope.

Energy Storage Harness. Energy storage harnesses play the role of signal and data transmission and power supply in the entire energy storage chain. The energy storage system requires a stable and reliable signal connection, which requires the energy storage wiring, Flame retardant and other functional aspects have very strict requirements.

Hydro Pumped-Storage Projects in Santiago Island, Cape Verde. The project's approach comprises hydropower potential evaluation, site identification and project design of 5 sites in Santiago island, Cape Verde, totaling around 150 MW.
