

# Energy storage alternative asset project planning

Does energy storage qualify as an "other"?

For energy storage to qualify as an "other," transmission planning engineers must find energy storage as a solution for reliability, age and condition, load growth, and local planning criteria need in the planning models. RTOs do not own generation, transmission, or distribution assets.

Does energy storage qualify as a GIP?

For energy storage to qualify as a GIP, transmission planning engineers must find energy storage as a solution for reliability needs in the planning models that study generator injections. To access the transmission system in an RTO, any external market resource should place a TSR.

Is energy storage an MP funded project?

In the 2019 MISO Transmission Expansion Plan (MTEP), only one of the total 480 projects approved was MP funded at a total cost of \$9 million out of approximately \$4 billion total project costs approved. 10 For energy storage to qualify as an MP funded project, an MP must come forward with a project.

Should energy storage be a transmission asset?

Adding a flexible resource like energy storage adds another level of complexity. Focusing on transmission project types and understanding that the business case for a reliability project type will look different relative to an economic project type, enables the storage industry to challenge RTOs and treat storage fairly as a transmission asset.

Does energy storage qualify as an MEP?

For energy storage to qualify as an MEP, transmission planning engineers must find energy storage as a solution for reducing historical transmission congestion. Multi-value projects (MVPs) are the "crown jewels" of MISO.

Will energy storage save the energy industry?

It's generation . . . it's transmission . . . it's energy storage! The renewable energy industry continues to view energy storage as the superhero that will save it from its greatest problem--intermittent energy production and the resulting grid reliability issues that such intermittent generation engenders.

Rendering of East Point Energy's proposed Reid Energy Center BESS project in Nokesville, Virginia. Image: Equinor. Equinor-owned East Point Energy has submitted a Public Facility Review application with the Prince William Planning Commission in Virginia, US, for the construction of a standalone battery energy storage system (BESS).. A public hearing has ...

Objectives include establishing a project plan to conduct a preliminary front end engineering design study at

# Energy storage alternative asset project planning

an NGCC plant owned by Southern Company. DOE Funding: \$199,931; Non-DOE ... Repurposing Fossil-Fueled Assets for Energy Storage -- Malta Inc. (Cambridge, Massachusetts) will perform a study on repurposing coal-fired electricity ...

and energy storage, showing the benefits of a co-optimization approach to reduce investment costs while meeting renewable portfolio standard constraints [14]. Dvorkin et al. considered transmission and energy storage co-planning from the per-spective of a merchant energy storage owner in a multi-level

Energy Storage Project in France: French utility RTE is planning its first 40 MW virtual transmission project called RINGO, with the goal of increasing grid integration of renewable energy and optimizing power flows on its network. RTE is proposing deploying two energy storage systems that will operate in tandem at each end of a line.

Mark Saunders, Co-Head of Energy Storage, spent three years at Goldman Sachs Renewable Power Group, led the formulation of an investment strategy for stand-alone storage assets and executed on ~255MW of energy storage deals and managed the onboarding of 2GWs of solar acquisitions. Previously, he spent three years as CEO of a solar technology start-up and 14 ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil ...

Dive Brief: Projects in Wisconsin and California show that bulk energy storage is a potentially valuable transmission grid asset, panelists said Sept. 17 on a Heatmap Labs webinar.. The projects ...

Spencer Hanes is Vice President of Business Development at EnerVenue, which builds metal-hydrogen batteries for large-scale renewable and storage applications. Prior to joining EnerVenue, Spencer spent 16 years with Duke Energy in various business development and public policy roles, focusing on focus on renewable energy and energy storage.

Value Stacking: An energy storage asset can serve more than one purpose, providing additional value on investment. Beyond arbitrage, energy storage systems can provide key ancillary ...

Another question for energy storage systems is whether any alternatives to lithium- ion will present themselves as scalable solutions. Lithium-ion batteries are effective for short-term energy storage capacity (typically up to four hours), but other energy storage systems will be needed for medium- and long-term storage capabilities.

Project Overview . Project Information . energy storage assets to provide both regulated transmission and competitive . Project Summary o FERC issued a policy statement in 2017 that would allow PSH and other market functions, but regional market operators have struggled to implement enabling regulations. This

# Energy storage alternative asset project planning

project seeks to objectively ...

We work together to promote the benefits of energy storage to decarbonising Ireland's energy system and engage with policy makers to support and facilitate the development of energy storage on the island. Energy storage will play a significant role in facilitating higher levels of renewable generation on the

There is a growing interest to consider energy storage (ES) and other non-wires alternatives (NWAs) to conventional distribution system solutions in applications such as distribution ...

Explore the benefits of storage as a transmission asset in power grid upgrades and provides an update on enabling regulatory changes. ... As a result, stakeholders want to integrate SATA in the form of battery energy storage systems (BESSs) to supplement or even replace traditional assets. ... vendors and project developers should focus on ...

annual amortisation rate for energy storage unit  $s$ ; investment return period of lines in the corridor  $(t, r)$  ... In this paper, we propose a joint storage and transmission expansion planning model, which is formulated as an MILP. This model is used to analyse the interactions between ESS units and transmission lines in the context of long-term ...

First established in 2020 and founded on EPRI's mission of advancing safe, reliable, affordable, and clean energy for society, the Energy Storage Roadmap envisioned a desired future for energy storage applications and industry practices in 2025 and identified the challenges in realizing that vision.

This MISO filing begs the question - how to treat energy storage as a transmission project? The industry needs to understand how RTO cost allocation works for new and existing transmission projects. To appreciate cost allocation, stakeholders need to grasp the fundamentals of transmission project categories. Because to put together a business ...

We test the proposed approach on a 240-bus model of the Western Electricity Coordinating Council system and analyze the effects of different storage technologies, rate of ...

In energy transmission, a new player is entering the field: Energy Storage as a Transmission Asset (SATA). Evolving from its traditional role as a backup power source, SATA is poised to reshape the fundamentals of our transmission systems, offering sustainable benefits in cost efficiency, environmental stewardship, and operational flexibility.

The asset will help balance generation of Octopus' renewable assets in Queensland including the 180MW Dulacca wind farm (pictured). Image: RES. Octopus Group's first standalone battery energy storage system (BESS) ...

# Energy storage alternative asset project planning

This paper presents a multi-stage dynamic planning method for clean resources and energy storage assets in power distribution networks. First, to facilitate low-carbon and resilient transitions, adaptive, stage-wise planning decisions are optimally determined under various planning strategies to mitigate risks stemming from hybrid uncertainties.

The benefits of grid alternative energy storage devices in delaying transmission line upgrades are one of the important indicators that need to be quantified in the project planning process. 2.2. Modeling of the Energy Storage ... Energy Storage Investment Cost (&#215;10<sup>8</sup> CNY))-3.17-0.96: Wind and Solar Curtailment Cost (&#215;10<sup>8</sup> CNY) 1.65: 0.91: 1. ...

Energy Storage as a Transmission Asset in MISO. MIPSYCON 2020 Virtual Conference. Randy Johanning, Senior Transmission Planning Engineer. System Planning, rjohanning@atcllc . 2. atcllc . Agenda o ATC Background ... Project Alternative & Comparison. 15 atcllc MISO Evaluation -Result

This paper presents a multi-stage dynamic planning method for clean resources and energy storage assets in power distribution networks. First, to facilitate low-carbon and resilient transitions, adaptive, stage-wise planning decisions are optimally determined under various ...

In this paper, energy storage resources that achieve these effects are defined as grid alternative energy storage. Grid alternative energy storage, as a non-wires alternative ...

oOur forthcoming paper, "Energy Storage as a Transmission Asset: Definitions and Use Cases," provides clarity on this topic by defining the ways that energy storage can interact with the transmission system and the specific use cases in which storage alternatives may be viable Figure 1: Defining the roles for energy storage on the ...

The project will be located near an existing solar farm, as seen in the image above. East Devon County Council agreed that the BESS was needed to store renewable energy from the grid when generation exceeds demand - a key argument for developing BESS. Detailed within the press statement, Statera declared that planning officers advised that the BESS ...

Renewable energy and energy storage developer Boom Power has successfully landed planning permission for a major battery energy storage system (BESS) project on the Isle of Anglesey, Wales, UK. The Carrog BESS is a 300MW/660MWh, 2-hour duration project located at Carrog Ganol, near Cemaes.

The investment cost of energy storage may increase if the ESSs are randomly allocated. This would also increase power loss, decrease voltage quality, and deteriorate the economic operation of the power system. ... SCOPUS, IEEEExplore, and ScienceDirect were chosen as the databases. The keywords "optimal planning of distributed generation and ...

# Energy storage alternative asset project planning

The title of this issue was updated in March of 2021 from "Energy Storage as Transmission Reliability Asset" to "Storage As Transmission-Only Asset (SATO)" to reflect FERC Order 172 FERC &#182; 61,132, which allows for the selection of a storage facility as a transmission-only asset (SATO) in the MISO Transmission Expansion Plan (MTEP).
