Senate Bill (SB) 100 established a landmark policy requiring renewable energy and zero-carbon resources supply 100 percent of electric retail sales by 2045. It requires the California Energy Commission, California Public Utilities Commission, and California Air Resources Board to submit a report to the Legislature every four years.

EMP's work spans: (1) recurring market tracking and data products; (2) cost, benefit, and market analysis; (3) grid operations, integration, and infrastructure; (4) community impacts and public response; (5) program and policy analysis; and (6) technical assistance. Selected Projects. Land-Based Wind Market Report; Utility-Scale Solar

Many people see affordable storage as the missing link between intermittent renewable power, such as solar and wind, and 24/7 reliability. Utilities are intrigued by the potential for storage to meet other needs such as relieving congestion and smoothing out the variations in power that occur independent of renewable-energy generation.
