The information provided in the documents supplements the information in the data sheets, quick install guides and product manuals.

How do I install an energy meter?

Detailed information is available in the CCGX manual chapter 5.2. An Energy Meter can be installed in the main distribution panel between the grid and the installation for a full or partial grid-parallel installation.

Can Enpower connect a PV combiner to a main load panel?

rcuit connection space in Enpower is left vacant. When existing PV combiner circuits are connected to the main load panel, and you want to add battery storage to the system, you can keep the PV combiner connected to the main load panel and c nnect only the battery storage system to Enpower.Partial home backup with main load panel as serv

What type of inverter/charger does the energy storage system use?

The Energy Storage System uses a MultiPlus or Quattro bidirectional inverter/chargeras its main component. Note that ESS can only be installed on VE.Bus model Multis and Quattros which feature the 2nd generation microprocessor (26 or 27). All new VE.Bus Inverter/Chargers currently shipping have 2nd generation chips.

How do I energize my encharge battery?

The Encharge Battery(ies) must be installed and energized by the "Must Energize By" date on the shipping box label. The Encharge Battery(ies) must have a charge state of no more than 30% when placed in storage. To do this, the Encharge Battery(ies) must be placed in Sleep Mode.
