Compressed Air Energy Storage (CAES): A high-pressure external power supply is used to pump air into a big reservoir. The CAES is a large-capacity ESS. It has a large storage capacity and can be started rapidly (usually 10 min). CAES installation necessitates unique geological conditions. There are restrictions in place all around the world.

Energy storage technologies with high energy capacity like PHS, compressed air energy storage (CAES), and gravity energy storage (GES) can provide excellently the black start service to the grid. There are six different categories of ESS, and these are: mechanical, thermal, chemical, electrochemical, electrical and hybrid system.
