The optimized particle mass flow and heat exchanger tube length using reactive material (sensible and chemical heat, SCH) are 0.39 kg/s and 278 m. Based on previous values, the costs of the heat exchanger based on SH and SCH storage materials are \$925.48/kW t and \$228.78/kW t, respectively. The sensible heat FB HX costs 4 times more than the ...

The heat transfer coefficient of a heat exchanger is easily affected by the heat flow rate (corresponding to the load rate of compression/power generation) while working on the off-design condition. Therefore, based on the heat transfer equation in, this section establishes an off-design model of heat exchanger in charge and discharge process.
