Demand for energy storage is on the rise. The increase in extreme weather and power outages also continue to contribute to growing demand for battery energy storage systems (BESS). As a result, there are many questions about sizing and optimizing BESS to provide either energy, grid ancillary services, and/or site backup and blackstart capability.

It enables the effective and secure integration of a greater renewable power capacity into the grid. BESSs are modular, housed within standard shipping containers, allowing for versatile deployment. When planning the implementation of a Battery Energy Storage System, policy makers face a range of design challenges.
