

Can energy storage batteries be recycled?

The popularity and cost effectiveness of energy storage battery recycling depends on the battery chemistry. Lead-acid batteries, being eclipsed in new installations by lithium-ion but still a major component of existing energy storage systems, were the first battery to be recycled in 1912.

Where should energy storage batteries be disposed?

Due to these potential issues, disposal should only take place at dedicated waste management centres and in many cases are subject to standards or regulations relating to disposal of dangerous goods. The popularity and cost effectiveness of energy storage battery recycling depends on the battery chemistry.
