Gas and oil boilers can't match electric boilers in terms of energy efficiency, as they very rarely achieve an efficiency above 93%. So, in terms of energy efficiency, the electric boiler is the outright leader but the ErP rating is much lower - which is why comparing electric boilers with gas and oil units can get confusing.

The modeling of electric boilers can be more complex, taking the thermal stratification effect into account. Thermal stratification in electric boiler storage tanks indicates different temperature levels in several layers inside the tank. In energy system models, many approaches are used to address the thermal stratification effect.
