The most common source of revenue for BSSs is purchasing electricity when the price is low and selling it (or consume it) when the price is high, called "price arbitrage" [4]. Alternative sources of revenue are available for providing flexibility services to transmission system operators, called "Ancillary Service".

Intermittent clean energy generation can be converted into natural gas by P2G. This conversion not only effectively reduces unused clean energy, but also strongly integrates electricity-gas networks (Manuel B et al., 2018; Zhang et al., 2018). Domestic and foreign scholars have conducted investigations on PIES with P2G.
