Performing cost/benefit analysis on Smart Grid systems poses interesting and challenging problems in measuring physical impacts and estimating economic benefits from them. However, when the Smart Grid systems are part of first-of-kind or demonstration projects, there are additional challenges to producing meaningful cost/benefit analysis.

The impacts can be managed by making the storage systems more efficient and disposal of residual material appropriately. The energy storage is most often presented as a "green technology" decreasing greenhouse gas emissions. But energy storage may prove a dirty secret as well because of causing more fossil-fuel use and increased carbon ...
