Adopt energy storage discharge in instant to complete position welding, it is simple and easy to operate, with high efficiency, safe and reliable. Put the metal screw and nut kind on metal, in convenience and swiftness, the weld combination strength is high, heating surface is little, base material isn't out of shape.

If the base material is less than 1.0mm, the M8 energy storage stud can be welded normally. 4. Suggestion The most reasonable choice is to use QZ99 energy storage welding when the thickness of the base material is less than 2.5mm and the size of the energy storage welding stud is less than M6.

The extremely short weld time of the capacitor discharge process allows studs to be welded to material as thin as .015 without burn-through. The unit is capable of welding mild steel, stainless steel, and aluminum studs, ranging from 14ga through 1/4" diameter.
