

Intelligent control of flywheel energy storage system associated with the wind generator for uninterrupted power supply. December 2020; ... (FOC) and a Fuzzy Logic Control (FLC). Simulation model ...

It reduces 6.7% in the solar array area, 35% in mass, and 55% by volume. 105 For small satellites, the concept of an energy-momentum control system from end to end has been shown, which is based on FESS that uses high-temperature ...

One of the most popular energy storage devices is the Flywheel Energy Storage System (FESS) which is used in this study to tackle the voltage and frequency variations. Among the benefits of FESS over other ESSs are its low maintenance costs, lengthy service life, lack of pollutants, high energy storage, quick charging, and limitless charge ...

In this paper, for high-power flywheel energy storage motor control, an inverse sine calculation method based on the voltage at the end of the machine is proposed, and angular compensation can be performed at high power, which makes its power factor improved. The charging and discharging control block diagram of the motor based on this ...

In energy storage systems for autonomous vehicles, flywheel energy storage machines still suffer from high rotating iron consumption, a weak rotor structure, and poor robustness. As a flywheel energy storage device, this study employs a homopolar machine with a doubly salient solid rotor to address these issues. It has a simple design, a strong rotor, and reduced rotational loss at ...

One energy storage technology now arousing great interest is the flywheel energy storage systems (FESS), since this technology can offer many advantages as an energy storage solution over the ...

To enhance the frequency regulation capability of direct-drive permanent magnet synchronous generator (PMSG)-based wind-power generation system, the frequency regulation control strategy for wind-power system with flywheel energy storage unit (FESU) based on fuzzy proportional plus differential (PD) controller is proposed in this study.

On the basis of current research, this work presents a machine-grid side coordinated control technique based on model predictive current control (MPCC) to improve the LVRT capacity of ...

Fuzzy-logic-based V/f control of the induction motor is proposed for the speed sensorless power-leveling system and the results verify that the proposed method is reliable, and better dynamic and static performance is demonstrated. Since natural distribution power generation systems such as wind energy contain electric power fluctuation, flywheel energy ...

The objective of this work is to study the association a Flywheel Energy Storage System (FESS) in wind generator. This system is used to improve the quality of electricity provided by wind ...

from publication: Control Strategy of DC Link Voltage Flywheel Energy Storage for Non Grid Connected Wind Turbines Based on Fuzzy Control | The large-scale development of wind power is an ...

Installing a certain capacity of flywheel energy storage system (FESS) at the grid connection of wind farms can effectively smooth the grid-connected power and improve the grid friendliness of wind farms. With the traditional control method, the FESS power response speed is slow and the flywheel speed is easy to exceed the limit. Considering these issues, this paper proposes a ...

With the traditional control method, the FESS power response speed is slow and the flywheel speed is easy to exceed the limit. Considering these issues, this paper proposes a control ...

Among these, the flywheel energy storage system (FESS) has features such as frequent power cycling, fast response time and long useful life ... Enriching the stability of solar/wind DC microgrids using battery and superconducting magnetic energy storage based fuzzy logic control. J Energy Storage, 45 (2022), Article 103751, 10.1016/j.est.2021. ...

Control strategy of flywheel energy storage machine-side converter based on fuzzy reasoning and sliding mode control[C]// 2022 4th International Conference on Power and Energy Technology (ICPET), IEEE (2022), pp. 1023 - 1029

The literature 9 simplified the charge or discharge model of the FESS and applied it to microgrids to verify the feasibility of the flywheel as a more efficient grid energy storage technology. In the literature, 10 an adaptive PI vector control method with a dual neural network was proposed to regulate the flywheel speed based on an energy optimization ...

As a flywheel energy storage device, this study employs a homopolar machine with a doubly salient solid rotor to address these issues. It has a simple design, a strong rotor, and reduced ...

The energy storage flywheel (FW) has the advantages of high energy efficiency, rapid response, high instantaneous power, low maintenance costs, ... The simulation results showed that the designed fuzzy control braking energy recovery strategy could prolong the driving time and improve the energy utilization rate of vehicles.

A control strategy of flywheel energy storage system participating frequency regulation with pumped storage Hao QIN 1 ... (ACE), the paper designs a grey-fuzzy-correction control which contains two fuzzy controller and a grey prediction to correct the energy distribution of the FESS and the pumped storage. Therefore, the FESS and the pumped ...

DOI: 10.1016/j.asoc.2022.109149 Corpus ID: 249685794; Fuzzy vector reinforcement learning algorithm for generation control of power systems considering flywheel energy storage

A flywheel energy storage system (FESS) is an effective energy-saving device. It works by accelerating a rotor flywheel disc at a very high speed and maintaining the energy in the ...

Simulation results show that the control strategy proposed can achieve the purpose of smoothing the grid-connected power of wind farms with good dynamic response characteristics, and the flywheel speed does not cross the limit during the smoothing process. Installing a certain capacity of flywheel energy storage system (FESS) at the grid connection ...

Highlights Integration of a variable-speed wind energy conversion system used with a flywheel energy-storage system has been described. Control algorithm based on the Fuzzy-Sliding Mode was investigated for the doubly fed induction machine. The proposed flywheel energy storage system has the ability and the reliability to produce more clean power to the grid.

Mitigation of Voltage and Frequency Oscillations of a Microgrid during Wind Gust by Using Fuzzy-Controlled Flywheel Energy Storage. *International Journal of Applied Energy Systems*, 6(1), 12-22. doi: 10.21608/ijaes.2023.221324.1020.

Pumped storage [10], battery energy storage [11], and flywheel energy storage system (FESS) [12] are commercial operations. However, the construction of pumped storage is limited by the environment [13]; battery energy storage has the disadvantages of low service life and environmental pollution [14].

The fuzzy logic is introduced in the stage of “generating rotor speed reference” to overcome the oscillations and slowness in traditional method and the developed control is superior to other methods in response time, precision, and quality of produced energy.

This paper focuses on investigating the operation of a novel unit comprising a solar power system integrated with a Flywheel Energy Storage System (PV-FESS). The aim is to develop an ...

Transient stability enhancement of a grid-connected wind farm using an adaptive neuro-fuzzy controlled-flywheel energy storage system. Correction(s) for this article Talha Ahmed Taj, Corresponding Author. Talha Ahmed Taj Electrical Engineering Department, College of Engineering, King Saud University, 11421 Riyadh, Saudi Arabia ...

Flywheel energy storage fuzzy control

The paper concentrates on performance benefits of adding energy storage system with the wind generator in order to regulate the electric power delivered into the power grid. Compared with other means of energy storage, the flywheel energy storage system (FESS) is the best choice to solve power quality problems.

When the hybrid energy storage system is charged, if the flywheel SOC is too high, most of the power is borne by the lithium battery energy storage system. Therefore, the membership function of power distribution coefficient of flywheel energy storage system under fuzzy control is shown in Fig. 3 (c).

Based on the state of charge (SOC) and the area control error (ACE), the paper designs a grey-fuzzy-correction control which contains two fuzzy controller and a grey prediction to correct the ...
