What is Honda's new stationary fuel cell power system?

Or follow us on Google News! On Friday, Honda unveiled a new stationary fuel cell power system that will serve as the backup power for its data center at its American Honda headquarters in Torrance, California. The stationary power system utilizes second life fuel cells taken from Honda's Clarity Fuel Cell Electric Vehicles.

How does Honda's stationary power system work?

The stationary power system utilizes second life fuel cells taken from Honda's Clarity Fuel Cell Electric Vehicles. The individual fuel cells are bundled together in 250 kW stacks, with two of these stacks installed at Honda's facility.

Does Honda have a backup power system?

Sign up for daily news updates from CleanTechnica on email. Or follow us on Google News! On Friday, Honda unveiled a new stationary fuel cell power system that will serve as the backup power for its data center at its American Honda headquarters in Torrance, California.

Are hydrogen fuel cells good for backup power?

"We believe there's great promise in hydrogen fuel cells for backup power and offsetting potential peak power events," said Koji Moriyama, project lead of the stationary fuel cell and principal engineer with American Honda R&D Business Unit.

Does Honda have a fuel cell system?

The initial systems will utilize Honda's existing fuel cells found in its Clarity though Honda continues to actively develop a next generation fuel cell system in partnership with General Motors. Honda continues to be bullish on fuel cells for both stationary storage and in its vehicles based on its early progress with these next generation units.

How much power does a Honda CR-V twin stack put out?

The twin stacks can put out more than 500 kW of power in total, which is more than sufficient to cover the 70 kW load of the full data center. American Honda VP of CASE & Energy Jay Joseph opens up the stacks to showcase the fuel cells inside.
