

How long can green grass be stored above ground

How long does grass seed last?

According to lawn leader Scotts, grass seed can be kept for 2 to 3 years if it's stored properly. There is also evidence that some species of grass seed last longer than others. A U.S. government study in the late 1970s found that for Bermuda grass seed, 50 percent or more of the seeds could be expected to germinate after 1 to 2 years.

How to store grass seed?

Let's discuss how to store grass seed to ensure it lasts as long as possible: 1. Keep it dry: Moisture is the number one enemy of stored grass seed. Exposure to moisture can cause mold to grow, rendering the seed unusable. Always store your seed in a dry environment, away from any potential sources of water. 2.

Does grass seed have a shelf life?

Grass seed, like all seeds, has a shelf life. Over time, the seed's viability--or its ability to germinate--decreases. This decline is gradual, meaning that the older the seed, the fewer seedlings will sprout. So, does grass seed get too old to use? Yes, but with the right storage methods, you can keep it viable for much longer than you might think.

Is old grass seed still viable?

But you may well wonder if that old grass seed is still viable, or if it has gone bad with age. If you store high-quality grass seed in ideal conditions that are dry and cool, you can count on the germination rates dropping 10% each year.

How long does Scotts grass seed last?

If stored in a cool, dry place, grass seed can last for 2-3 years. However, the germination rate (the number of seeds that will grow) will decrease over time, so you may not get the same results you would if you were using fresh seed. For best results, use fresh product and try to plant it within a year. [Where Can I Buy Scotts' Grass Seed?](#)

Can grass seeds be stored at a different temperature?

The short answer is Yes, they can. The proper temperature management and storage conditions are required to store the grass seeds. The temperature of the place where you have to store the grass seeds must be below 90 Degrees and above 40 degrees.
