

What technologies are involved in zero-carbon industrial parks?

In addition, many scholars have conducted in-depth research on the technologies involved in zero-carbon industrial parks, such as hydrogen energy storage [7, 8, 9, 10, 11], Integrated Energy System planning [12, 13, 14, 15], CCUS [16, 17, 18, 19], zero-carbon transportation [20, 21], zero-carbon buildings [22, 23], etc.

Does an industrial park need an energy control center?

The industrial park must have an energy control center. That center would be the connection between prosumers, energy storage facilities and the power supply grid outside the industrial park. The prosumers cannot produce enough energy due to the changeable meteorological conditions.

What is the electricity load required for the production of industrial park?

The electricity load required for the production of the industrial park is shown in Fig. 4 (b). As can be seen, the electricity load in summer and autumn is 20% higher than that in spring and winter. From Fig. 4 (c), the minimum of hydrogen load is 105.458 kW and the maximum is 339.196 kW.

What is the heating and cooling load of the Industrial Park?

It is assumed that land area occupied by the industrial park is 26 km<sup>2</sup>, and 24 km<sup>2</sup> is adopted for buildings. The heating and cooling loads of buildings are shown in Fig. 4 (a), which are simulated by the hourly air temperature. Among them, the maximum cooling load is 2933.78 kW, and the maximum heating load is 1439.52 kW.

Can PEIP exist in a certain type of industrial park?

In relation to this, PEIP or its close forms were analyzed and addressed many problems related to a certain type of industrial park. Based on everything given in this article, PEIP can exist only if every unit (production system or factory) represents prosumer that will be connected to the energy network of IP.

How can digital technology improve energy management in a park?

Meanwhile, digital technology can be used to collect various energy data in the park, such as photovoltaic, energy storage and charging stations, enabling intelligent management and control of the park. Fig. 1.

The energy system of industrial park is a typical multi-energy system which consists five types of energy. As shown in Figure 1, the loads of industrial users are highly controllable. Then, we can use the high controllability of industrial users to improve system efficiency. Figure 1 shows the relationships between different types of energy ...

With the development of the industrial Internet, China's traditional industrial energy industry is constantly

changing in the direction of digitalization, networking, and intellectualization. The energy dispatching system enabled by industrial Internet technology integrates more advanced information technology, which can effectively improve the dispatching and management ...

Energy storage has been widely used in industrial parks, but the role of a single energy storage technology in such industrial parks" is limited and cannot meet the full needs of energy storage [19]. For example, electricity storage technology has high energy quality and a wide range of applications, but also has a high unit cost and low ...

Firstly, based on the characteristics of the big data industrial park, three energy storage application scenarios were designed, which are grid center, user center, and market center. On this basis, an optimal energy storage configuration model that maximizes total profits was established, and financial evaluation methods were used to analyze ...

Global energy crisis and environmental pollution promote the development of microgrid technology and electric vehicle industry [].The construction of the new energy microgrid fully responds to the policy guidance of the "Internet + intelligent energy" and the energy Internet, which is conducive to promoting the realization of the energy supply side reform and ...

Table 1. Performance comparison of typical electricity storage methods [ 18, 61 - 64] Energy storage types. Specific energy (Wh/kg) Specific power (W/kg) Rated power. Energy storage ...

In November 2014, the State Council of China issued the Strategic Action Plan for energy development (2014-2020), confirming energy storage as one of the 9 key innovation fields and 20 key innovation directions. And then, NDRC issued National Plan for tackling climate change (2014-2020), with large-scale RES storage technology included as a preferred low ...

Then, considering the load characteristics and bidirectional energy interaction of different nodes, a user-side decentralized energy storage configuration model is developed for a multi ...

The subsidiary of China-based Xiamen Hithium Energy Storage Technology Co. specializes in battery energy storage systems. The assembly plant--Hithium's first in North America--will be located at 20 East Trinity Pointe in Mesquite and will bring 141 manufacturing jobs to the city when it goes online in 2029. ... The 284-acre industrial park ...

The global GHG, including CO<sub>2</sub>, emissions are still rising year by year, especially for fuels and industrial emissions. Achieving carbon emissions neutrality is a goal for many governments to achieve around 2060. Industrial emissions are one of the main sources of carbon emissions, and the flexibility of their emission reduction methods makes carbon emissions ...

The development of energy storage technology (EST) has become an important guarantee for solving the volatility of renewable energy (RE) generation and promoting the transformation of the power system. ... Karlsruhe Institute of Technology, National Institute for Advanced Industrial Science and Technology, Kyoto University, Tohoku University ...

Establishing an industrial park-integrated energy system (IN-IES) is an effective way to reduce carbon emission, reduce energy supply cost and improve system flexibility. ... The seasonal energy storage analysis approach of [[16], [17] ... Sustainable green-based hydrogen production technology roadmap using fuzzy multi-aspect multi-criteria ...

Power curtailment of industrial park MECS is very few, in line with requirements of national policy and energy-efficient development, which is to benefit from the hydrogen energy storage system. As shown in Fig. 9, Fig. 10, when power generation of the system is greater than power demand, ELs begin to produce hydrogen for sale or store.

The multi-vector energy solutions such as combined heat and power (CHP) units and heat pumps (HPs) can fulfil the energy utilization requirements of modern industrial parks. The energy ...

The commonly used energy storage technologies in industrial parks (Figure 3) were divided into electricity storage (lead-acid battery, lithium battery, supercapacitor, flywheel storage, etc.), ...

1. Introduction. Industrial parks are distributed throughout the world. They concentrate on intensive production or service activities on a single piece of land [1]. There are approximately 2500 national and provincial industrial parks in China, with a total area of more than 30,000 square kilometers [2] these industrial parks, 87 % of energy originates from coal ...

Improvements in energy and material efficiency, and a greater deployment of renewable energy, are considered as essential for a low-carbon transition [7]. The potential for CO<sub>2</sub> emission reduction offered by renewable energy sources (RES) in energy production and industrial processes is emphasized by the International Energy Agency [8] industries can buy ...

Distributed photovoltaics (PVs) installed in industrial parks are important measures for reducing carbon emissions. However, the consumption level of PV power generation in different industries varies significantly, and it is often difficult to consume 100% of the PV power generation. The shared energy storage station (SESS) can improve the consumption level of ...

The constraints are to meet the energy needs of users and the limits of energy storage capacity and power. The fitness-related optimization algorithm is adopted to solve the problem, and ...

Establishing an industrial park-integrated energy system (IN-IES) is an effective way to reduce carbon

emission, reduce energy supply cost and improve system flexibility. ...

Heng Luo, Xiao Yan, etc., Charging and Discharging Strategy of Battery Energy Storage in the Charging Station with the Presence of Photovoltaic, *Energy Storage Science and Technology*, 2022(1),275-282;

Energy storage is one of the most important elements of PED and also for EIP. The storage of heat and electricity must be quality and long lasting as it is possible. Fang et al. (2021) analyzed hybrid energy storage system in an industrial park based on variational mode decomposition and Wigner - Ville distribution. IP has energy management ...

The application of a hybrid energy storage system can effectively solve the problem of low renewable energy utilization levels caused by a spatiotemporal mismatch between the energy ...

The structural diagram of the zero-carbon microgrid system involved in this article is shown in Fig. 1. The electrical load of the system is entirely met by renewable energy electricity and hydrogen storage, with wind power being the main source of renewable energy in this article, while photovoltaics was mentioned later when discussing wind-solar complementarity.

The cost of mainstream energy storage technology has decreased by 10-20% per year over the last 10 years. This trend will continue in 2020, but the cost of energy storage technology cannot be infinitely reduced, and it is expected that costs will become stable after energy storage reaches a certain scale.

The development history of energy storage technology can be traced back to the early 19th century, when people began to explore methods of converting electrical energy into chemical energy, thermal energy storage and other forms for storage. It was not until the early 20th century that electrochemical energy storage technology represented by lead-acid batteries began to ...

1.1 Green Energy Development Is Promoted Globally, and the Hydrogen Energy Market Has Broad Prospects. To ensure energy security and cope with climate and environmental changes, the trend of clean fossil energy, large-scale clean energy, multi-energy integration and re-electrification of terminal energy is accelerating, and the transition of energy ...

The potential for energy conservation and emission reduction in parks is enormous, promoting the popularization of low-carbon parks is a necessary means to promote the green and low-carbon ...

Work in [7, 8] highlights that the gradual maturation of renewable energy generation technologies and the reduction in their costs offer potential avenues for addressing the current challenges of high energy consumption and greenhouse gas emissions in industrial parks. Distributed photovoltaic (PV) technology has the potential to fully utilize existing ...
