What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Should energy storage systems be mainstreamed in the developing world?

Making energy storage systems mainstream in the developing world will be a game changer. Deploying battery energy storage systems will provide more comprehensive access to electricity while enabling much greater use of renewable energy, ultimately helping the world meet its Net Zero decarbonization targets.

How will energy storage systems impact the developing world?

Mainstreaming energy storage systems in the developing world will be a game changer. They will accelerate much wider access to electricity, while also enabling much greater use of renewable energy, so helping the world to meet its net zero, decarbonization targets.

How can energy storage help the electric grid?

Three distinct yet interlinked dimensions can illustrate energy storage's expanding role in the current and future electric grid--renewable energy integration, grid optimization, and electrification and decentralization support.

Why is energy storage important?

Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible.

Should energy storage be interconnected?

All the generation and storage devices should be interconnected and managed by the energy platform. A large barrier is the high cost of energy storage at present time. Many technologies have been investigated and evaluated for energy storage. Different storage technologies should be considered for different applications.
