What is a lithium titanate battery?

A lithium-titanate battery is a modified lithium-ion battery that uses lithium-titanate nanocrystals, instead of carbon, on the surface of its anode. This gives the anode a surface area of about 100 square meters per gram, compared with 3 square meters per gram for carbon, allowing electrons to enter and leave the anode quickly.

What are the advantages of lithium titanate batteries?

Lithium titanate batteries come with several notable advantages: **Fast Charging:** One of the standout features of LTO batteries is their ability to charge rapidly--often within minutes--making them ideal for applications that require quick recharging.
