

renewable energy generation [3,4]. However, the high investment and construction costs of energy storage devices will increase the cost of the energy storage system (ESS). The application of electric vehicles (EVs) as mobile energy storage units (MESUs) has drawn widespread attention under this circumstance [5,6].

Mobile power sources (MPSs), consisting of plug-in electric vehicles (PEV), mobile energy storage systems (MESSs), and mobile emergency generators (MEGs), can be taken into account as the flexible sources to enhance the resilience of DSs [9], [16]. In comparison with other resilience response strategies, the MESSs have various advantages.

The use of internal combustion engine (ICE) vehicles has demonstrated critical problems such as climate change, environmental pollution, and increased cost of gas. However, other power sources have been identified as replacement for ICE powered vehicles such as solar and electric powered vehicles for their simplicity and efficiency. Hence, the deployment of Electric vehicles ...

Energy storage systems play a crucial role in the overall performance of hybrid electric vehicles. Therefore, the state of the art in energy storage systems for hybrid electric vehicles is discussed in this paper along ...

This is even more imperative now that electric vehicles can be considered a grid storage asset with the implementation of vehicle-to-grid bidirectional charging strategies. This study aims to ...

response for more than a decade. They are now also consolidating around mobile energy storage (i.e., electric vehicles), stationary energy storage, microgrids, and other parts of the grid. In the solar market, consumers are becoming "prosumers"--both producing and consuming electricity, facilitated by the fall in the cost of solar panels.

Vehicle-for-grid (VfG) is introduced as a mobile energy storage system (ESS) in this study and its applications are investigated. Herein, VfG is referred to a specific electric vehicle merely utilised by the system operator to provide vehicle ...

Vehicle-for-grid (VfG) is introduced in this paper as an idea in smart grid infrastructure to be applied as the mobile ESS. In fact, a VfG is a specific electric vehicle utilised by the system operator to provide vehicle-to-grid (V2G) and grid-to-vehicle (G2V) services. In this study, plural form of VfG, that is, vehicles-for-grid is

Electric vehicles (EVs) are at the intersection of transportation systems and energy systems. The EV batteries, an increasingly prominent type of energy resource, are largely underutilized. We propose a new business model that monetizes underutilized EV batteries as mobile energy storage to significantly reduce the demand charge portion of many commercial ...

The stability problem of the power system becomes increasingly important for the penetration of renewable energy resources (RESs). The inclusion of electric vehicles (EVs) in a power system can not only promote the consumption of RESs, but also provide energy for the power grid if necessary. As a mobile energy storage unit (MESU), EVs should pay more ...

Vehicle-for-Grid Options 6.1 Electric Vehicles Electric vehicles, by definition vehicles powered by an electric motor and drawing power from a rechargeable traction battery or another portable energy storage

Therefore, this paper reviews the benefits of electric vehicles as it relates to grid resilience, provision of mobile energy, economic development, improved environment, and infrastructure ...

Characteristics of inlet guide vane adjustment of multi-stage axial compressor in compressed air energy storage . The variation of the axial compressor characteristic curves during IGV adjustment is visually depicted in Fig. 8. The normalized mass flow m_{nor} , total pressure ratio p_{tot} , and isentropic efficiency η_{ise} are defined in Eqs.(7), (8), (9), where m represents the mass ...

Thermal Energy Storage (TES) systems are pivotal in advancing net-zero energy transitions, particularly in the energy sector, which is a major contributor to climate change due to carbon emissions. In electrical vehicles (EVs), TES systems enhance battery performance and regulate cabin temperatures, thus improving energy efficiency and extending vehicle ...

Vehicle-for-grid (VfG) is introduced as a mobile energy storage system (ESS) in this study and its applications are investigated. Cooperation of electric vehicle and energy storage in reactive 1.

Due to that photovoltaic power generation, energy storage and electric vehicles constitute a dynamic alliance in the integrated operation mode of the value chain (Liu et al., 2020, Jicheng and Yu, 2019, Jicheng et al., 2019), the behaviors of the three parties affect each other, and the mutual trust level of the three parties will determine the depth of cooperation in the ...

Additionally, integrating electric vehicles as mobile energy storage within this framework can lead to a further 10 % reduction in operating costs. Introduction. The combustion of fossil fuels has emerged as a critical concern for climate change, necessitating a transition from a carbon-rich energy system to one dominated by renewable sources ...

After considering the mobile energy storage characteristics of EVs, a large number of EVs from Building 1 and Building 3 are parked around Building 2 from 00:00 to 05:00 according to the parking generation rate in Appendix B1. ... Charging and discharging scheduling strategy for electric vehicles considering mobile energy storage [J] Autom ...
