

A novel photothermal energy storage phase change ... The support material cannot maintain a long service life of. SA under the action of external forces, chemicals, and thermal radiation. ...

This paper studies the energy storage and generation characteristics of the photovoltaic power generation coupling compressed air energy storage system for the 5 kW base station, and analyzes the photovoltaic power generation characteristics within 24 h and its influence on the flow characteristics of the compressed air energy storage system. The results ...

Nanoparticles have been thoroughly investigated in the last few decades because they have many beneficial and functional qualities. Their capability to enhance and manipulate light absorption, thermal conductivity, and heat transfer efficiency has attracted significant research attention. This systematic and comprehensive work is a critical review of ...

Importantly, the prepared composite PCMs, with a controllable melting temperature of 573.2-654.2 °C, thermal energy storage density of 30.9-37.3 J/g, great repeatable utilization performance ...

Life & medical sciences ... such as in the application of solar water heaters. In addition, there are photothermal power generation and photothermal energy storage device design (Figure ... pathway is significant in a reaction and the generated heat is a relatively large portion of the absorbed solar energy, photothermal co-catalysis can occur. ...

High measured energy densities of up to 559 kJ kg⁻¹ (155 Wh kg⁻¹), long storage lifetimes up to 48.5 days, and high quantum yields of conversion of up to 94% per ...

Emerging phase change material (PCM)-based photothermal conversion and storage technology is an effective and promising solution due to large thermal energy storage ...

To address the above issues, a potentially smart strategy is found by developing macrostructured photothermal storage superhydrophobic (MPSS) surfaces, which integrate the functions of macrostructured superhydrophobic materials, photothermal materials, and phase change materials (PCMs), and are expected to achieve all-day anti-icing in various ...

Direct-photothermal energy conversion and storage experiment: The 300 W Xe-lamp was used as the solar simulator in the direct-photothermal energy conversion and storage experiment with the intensity adjusted from 0.5 to 2 kW/m². During the experiment, the thermocouple was attached to the surface at different positions of the SA-PCB-20 to ...

The thermal energy storage (TES) potential of PCMs has been deeply explored for a wide range of applications, but not limited to solar/electrothermal energy storage, waste heat recovery, energy ...

Interestingly, the wearable thin film can convert solar and electrical energy into thermal energy and store it as latent heat with a high photothermal conversion efficiency of ...

Photothermal phase change energy storage materials show immense potential in the fields of solar energy and thermal management, particularly in addressing the intermittency issues of solar power ...

Energy is a key element in relation to human life, economic development and social progress. With the rapid development of the world in recent decades, the demand for energy in all aspects has been increasing. ... Therefore, it is of great significance to develop a photothermal conversion energy storage material with low cost and high energy ...

The global energy transition requires new technologies for efficiently managing and storing renewable energy. In the early 20th century, Stanford Olshansky discovered the phase change storage properties of paraffin, advancing phase change materials (PCMs) technology []. Photothermal phase change energy storage materials (PTCPCEsMs), as a ...

of energy systems. Photothermal phase change energy storage materials show immense potential in the fields of solar energy and thermal management, particularly in addressing the intermittency issues of solar power. Their multifunctionality and efficiency offer broad application prospects in new energy technologies,

To address China's small coal power units facing shutdown and retirement, which urgently need life cycle extension and renovation, a complete solar thermal storage simulation power generation system based on the original site of a decommissioned thermal power unit is developed using Ebsilon software in this study. The operational characteristics of the ...

More than 70% of global primary energy input is wasted as heat, about 63% of which occurs as low-grade heat below 100°C. 1 Although pyroelectric technology can convert such low-grade heat into high-grade electric energy, the energy conversion efficiency is always lower than 2% by economically viable means. 2 In consideration of the huge demand of low ...

Solar energy is a high-priority clean energy alternative to fossil fuels in the current energy landscape, and the acquisition, storage, and utilization of solar energy have long been the subject of research [[1], [2], [3], [4]]. The development of new materials has facilitated the technique for utilizing solar energy [5], such as phase change materials (PCMs), which have ...

However, because of its low energy density and uncontrollable recovery half-life, it is difficult to meet the needs of large-scale solar energy storage application [26]. To address this issue, previous studies typically considered intermolecular forces (number and strength of hydrogen bonds), intramolecular electron

interactions, and steric ...

[18, 109] During the photothermal catalysis process, solar energy can be used to destroy the chemical bonds to degrade organic pollutants. At the same time, it also can generate new chemical bonds for energy storage in hydrogen (H_2), carbon oxide (CO), methane (CH_4), and so on. Therefore, photothermal catalysis can be an alternative or ...

Composite phase change materials can maintain good shape stability and excellent thermal energy storage capacity. The thermal storage efficiency and photothermal conversion efficiency are 98.28% and 81.83%, respectively. Meanwhile, the thermal conductivity of the composite phase change material is 3.65 times that of pure PA.

To obtain a novel phase-change material with high enthalpy and long endurance for photo-thermal energy storage, multi-walled carbon nanotubes and h-BN were modified to form carboxylated supporting materials for HA, which have hydroxyl groups. The results of Fourier transform infrared spectroscopy and thermogravimetric analysis suggested the interaction ...

Explore the broad spectrum of applications for photothermal materials, including their transformative roles in photothermal catalysis, sterilization and therapy, desalination, and the generation of electric energy through photothermal conversion.

Supercapacitors are favored by researchers because of their high power density, especially with the acceleration of people's life rhythm. However, their energy density, especially from the point of view of the whole energy storage device, is far lower than that of commercial batteries this work, a kind of customizable full paper-based supercapacitor ...

Improvement of azobenzene photothermal energy storage density via grafting onto g-C₃N₄ and introducing hydrogen bonding ... maximum power density of 2419.7 W kg⁻¹; and good storage half-life of ...

In order to circumvent the poor performance of photothermal storage of pristine Azo-PCHS materials, a strategy of introducing structurally modified Azo into carbon nano substrate was proposed and a series of Azo/carbon PCHS materials with remarkable photothermal storage capacity and long life cycle were prepared [[17], [18], [19], [20]].

Photo-thermal energy storage is a crucial component of sustainable photo-thermal conversion applications [[7], [8], [9]], and improving both the solar absorption ability ...

The increase of global carbon emissions is closely related to global economic growth [1], [2]. However, with the gradual increase of global awareness and determination to deal with climate change and the introduction of laws and policies to control greenhouse gas emissions, the growth rate of global greenhouse gas emissions has slowed down, and the ...

The rapid growth in energy demand, declining fossil fuel reserves and the projected energy crisis have forced the scientific community to reassess its research priorities and shift toward alternative, viable and environmentally friendly energy sources [1]. Different types of energy technologies, including thermoelectric power generation, solar photovoltaic, solar ...
