The material storage methods are less mature compared to the physical storage methods and depend on the continuous research and development of advanced materials [18]. These methods include hydrogen storage in metal organic frameworks (MOFs), metal hydrides, metal borohydrides, liquid organic hydrogen carriers (LOHCs), and chemical storage.

The aircraft carrier was fitted with four 30t bronze propellers in October 2013. Both the launch and first voyage of the ship took place in November 2013. Anchor testing on board the carrier was completed in June 2014 while the US Navy conducted electromagnetic aircraft launch system (EMALS) testing on the aircraft carrier in May 2015.

Beyond the physical restraints and devices, specialized equipment such as aircraft elevator systems can also play a role in securing aircraft on an aircraft carrier deck. These elevators are used to move the aircraft between the flight deck and the hangar deck, allowing for efficient storage and maintenance.
