Also available in power and energy cells, these types of cells can be used in batteries designed to meet sealed lead acid battery dimensions. While dimensionally larger than a cylindrical cell, prismatic cells pack more amp-hours per cell by having more lithium by volume, allowing for larger battery pack configurations and single-cell options.

Batteries and similar devices accept, store, and release electricity on demand. Batteries use chemistry, in the form of chemical potential, to store energy, just like many other everyday energy sources. For example, logs and oxygen both store energy in their chemical bonds until burning converts some of that chemical energy to heat.
