What is solar inverter efficiency?

Inverter efficiency is a measure of how efficient your inverter is at converting your solar panels' DC electricity into AC electricity to power your home. The higher your inverter's efficiency, the less electricity you lose over time. It's important to note that an inverter's efficiency will never be 100%.

What wattage should a solar inverter be?

Your inverter's wattage should match the wattage of your solar panel system. If you have a 7,000-watt solar panel system, your inverter size should be at least 7,000 watts. When it comes to solar products, you'll likely see kilowatts used as a unit of energy measurement more than watts. That's fine; the same rule still applies with kW.
