What is shared energy storage?

With shared energy storage, multiple consumers will have access to the energy storage by charging and discharging the energy storage depending on their own needs. In this case, consumers can reduce the burden of the installation of energy storage by sharing initial investment costs.

Can shared energy storage be implemented in residential communities?

Hence, there have been significant efforts to implement shared energy storage in residential communities. For example, three 34 kWh energy storage units that were each shared among 5 to 15 houses were installed in Sacramento, California's Anatolia III Solar Smart Homes Community.

How to create a shared energy storage community?

Community setup The first step to have shared energy storage is to form communities which are built by using the k-means approach. The geographical locations (longitude and latitude) are used to cluster the households. In this case, K = 3 is used to form three communities due to the distance limitation of CES and the road intersection.

Are shared energy resources better than private energy storage?

We demonstrate the advantages of using shared as opposed to private energy storage. Distributed Energy Resources have been playing an increasingly important role in smart grids. Distributed Energy Resources consist primarily of energy generation and storage systems utilized by individual households or shared among them as a community.

What is the objective function of a shared energy storage system?

The objective function (2a) is designed to minimize the total energy cost of the entire residential community using shared energy storage. Constraint (2b) restricts that each consumer can have access to only one energy storage, i.e., only one energy storage can be assigned to each consumer.

Is shared energy storage a viable alternative to conventional energy storage?

A hybrid solution combining analytical and heuristic methods is developed. A comparative analysis reveals shared energy storage's features and advantages. Shared energy storage has the potential to decrease the expenditure and operational costs of conventional energy storage devices.

This paper studies capacity allocation of an energy storage (ES) device which is shared by multiple homes in smart grid. Given a time-of-use (TOU) tariff, homes use the ES to shift loads from peak periods to off-peak periods, reducing electricity bills. In the proposed ES sharing model, the ES capacity has to be allocated to homes before the homes" load data is ...
