The flywheel schematic shown in Fig. 11.1 can be considered as a system in which the flywheel rotor, defining storage, and the motor generator, defining power, are effectively separate machines that can be designed accordingly and matched to the application. This is not unlike pumped hydro or compressed air storage whereas for electrochemical storage, the ...

1. Low weight: The rather high specific energy of the rotor alone is usually only a fraction of the entire system, since the housing has accounts for the largest weight share. 2. Good integration into the vehicle: A corresponding interface/attachment to the vehicle must be designed, which is generally easier to implement in commercial vehicles due to the more generous ...
