Trip circuit supervision scheme, when the circuit breaker is closed... By incorporating a simple modification, the trip circuit supervision facility can be extended to the breaker OFF status also, as shown below: TCS Scheme, when the circuit breaker is open or closed... In both the above cases, the trip circuit supervision is continuous.

3. Trip Circuit Supervision Schemes. The trip circuit extends beyond the relay enclosure and passes through more components such as fuses, links, relay contacts, auxiliary switch contacts and so on, and in some cases, through a considerable amount of circuit breaker wiring with intermediate terminal boards. These complications, coupled with the ...

The 14.5V we set in the calibration is called the Tripping Point. When the Tripping point is set to 14.5V, the battery will charge for about 75% of its capacity. If you want to charge 100%, then set the tripping point to 16V by removing the 7815 regulator and directly supplying 18V DC, but this is not recommended. Circuit Explanation
