Can liquid hydrogen storage be used in Class 8 heavy duty trucks?

We investigate the potential of liquid hydrogen storage (LH₂) on-board Class-8 heavy duty trucks to resolve many of the range, weight, volume, refueling time and cost issues associated with 350 or 700-bar compressed H₂ storage in Type-3 or Type-4 composite tanks.

Can a fueling station Power a heavy-duty truck?

Existing retail fueling stations would pump hydrogen-carrying liquids onto the heavy-duty truck, where retrofitted equipment would release the hydrogen as needed to power the truck.

How far can a fuel cell system refuel a heavy duty truck?

If a fuel cell system for Class-8 heavy duty trucks achieves a fuel economy of 7.6-8.5 miles/kg-H₂ on a truck relevant duty cycle, we calculate a range of 660-738 miles (1060-1187 km) between consecutive refuelings.

Can LH₂ storage systems be used for heavy-duty trucks?

This paper considers the practical applicability of LH₂ storage systems for heavy-duty trucks. In combination with a companion paper, potential systems for LH₂ storage and delivery are modeled to establish necessary vessel wall and insulation thicknesses to determine system cost as well as volumetric and gravimetric performance.

Is LH₂ a good fuel for heavy truck transportation?

LH₂ is promising fuel for heavy truck transportation with long autonomy and low cost. High H₂ weight fraction (19.6%) promises autonomy and little impact on cargo capacity. High H₂ system storage density (>40 gH₂/L) minimizes impact on trailer cargo volume. Low system cost at \$174-\$183 per kg of useable H₂ reduces impact on truck capital cost.

Are LOHCs a good hydrogen carrier for long-haul trucking?

LOHCs thus appear to be ideal hydrogen carriers for long-haul trucking. They're liquid, so they can easily be delivered to existing refueling stations, where the hydrogen would be released; and they contain at least as much energy per gallon as hydrogen in a cryogenic liquid or compressed gas form.

Markus Bachmeier: The growing interest in this hydrogen technology from both hydrogen station operators and traditional fuel retailers is due to various advantages: trucks with the newly developed sLH₂ onboard storage tanks can travel distances over 1,000 km (620 miles) and refuel at the same speed as today's diesel trucks. To bring this ...

Petroleum storage tank near Detroit, United States. Storage tanks are containers that hold liquids or compressed gases. The term can be used for reservoirs (artificial lakes and ponds), and for manufactured containers. The usage of the word "tank" for reservoirs is uncommon in American English but is moderately common in British English. In other countries, the term tends to refer ...

An underground storage tank (UST) system is a tank (or a combination of tanks) and connected underground piping having at least 10 percent of their combined volume underground. The tank system includes the tank, underground connected piping, underground ancillary equipment, and any containment system.

Powering heavy-duty vehicles, such as Class 8 semi trucks, requires very energy-dense storage systems: even the most advanced batteries do not provide sufficient energy density. Hydrogen is a promising fuel source for these difficult-to-decarbonize sectors. ... Single-tank system tested. Recently, the LLNL and Verne teams tested a single-tank ...

However, intensive use and long distances require high energy storage, which increases battery mass, reduces available cargo volume in the vehicle, and boosts costs and energy consumption [4].
