In the second part of our interview with Valts Grintals, analyst at ...

Figure 1 - Typical behind-the-meter energy storage system Technology stack. Once the power rating has been selected, an energy duration level must be chosen. Like the power rating, the energy duration of the system is dependent on the particular application it will ...

Investing in on-site or near-site energy generation, otherwise known as "behind the meter" energy, offers several benefits for energy-intensive businesses such as data centres. In fact, it is sites like data centres, which rely heavily on high energy usage to operate, that have the most to gain from on-site and near-site energy

generation ...

Even with this boost in deployment, behind-the-meter energy storage systems have not reached their potential for maximum value to the grid. CSE examines why and what policy reforms are needed and most integral to exploit their value to both customers and the grid in a policy white paper, *Maximizing the Grid Benefits of Behind-the-Meter Energy Storage*.

Large-Scale Energy Storage: These systems, such as utility-scale battery storage or pumped hydro storage, store excess energy and release it when demand on the grid is high or the energy supply is low. They are crucial for grid stability and for integrating intermittent renewable energy sources like wind and solar.

The target capacity of the Wellington BESS is 500 MW / 1,000 MWh, making it one of the largest battery storage projects in NSW. The Wellington BESS will connect to the ...
